$M_{tot} = c_{A,i} V_A$ 

Initial:

Final  $(D = \frac{c_{o,f}}{c_{A,f}})$ :

$$M_{tot} = c_{A,f} V_A + c_{o,f} V_o$$

Solving for 
$$c_{o,f}$$
 in terms of  $D$ : 
$$c_{o,f} = \frac{M_{tot}}{V_{A \perp} V}$$

 $c_{o,f} = \frac{M_{tot}}{\frac{V_A}{D} + V_o}$ 

$$c_{o,f} = \frac{1}{\frac{V_A}{D} + V_o}$$
 Solving for  $\frac{c_{A,i}}{c_{o,f}}$ :

 $\frac{c_{A,i}}{c_{o,f}} = \frac{\frac{V_A}{D} + V_o}{V_A} = \frac{1}{D} + \frac{V_o}{V_A}$
